# Safety instructions

We recommend to read through the following instructions before using this device in order to limit the risk of injury, electric shock or fire. The device is designed for indoor usage with temperature ranging between 5 °C and 45 °C.

- 1. Read and follow the instructions contained in guide carefully.
- When cleaning the ADSL modem please disconnect it. Use slightly wet cloth; DO NOT USE liquid detergent or aerosols.
- 3. DO NOT USE this device in a humid environment.
- 4. Do not put heavy objects on the connected cables to prevent damage.
- 5. Protect the modem from being polluted by any liquid substance.
- 6. In case you need maintenance disconnect the modem from both phone line and PC and contact a qualified service organization.

# Warning!

There are lots of viruses and pirate software in the Internet environment that may afflict function of your PC and safety of your data. This is why we strongly recommend you to make sure you have antivirus protection properly installed and activated. New viruses emerge almost every day, making regular updating of your antivirus application a necessity.

Protection of your PC against undesirable software that is installed automatically from the Internet while the user is unaware of it (adware and spyware) is of equal importance.

For Windows XP users is strongly recommended to switch on the *"Internet connection Firewall"* after installing the modem. This function you'll find in properties of network connection – advanced. In the basic setting is this function deactivated.

# Installation recommendations

# **!!Please note: do not connect your modem to the PC prior to driver installation and follow further instructions!!**

Before the start of installation process we recommend to close all running programs and save all processed files, as the very first step of driver installation is to reboot your computer. In case you have any data files open these could be damaged and data could be lost.

Before the driver installation also check the phone signal and verify function of the line as well.

Just in case you have connected the ADSL modem to USB port prior to the driver installation, new hardware will be detected automatically and a window shall appear prompting you to select location of the driver.

We recommend canceling this process and stopping this new hardware installation. Correct driver installation requires special software to be run that cannot be launched during automatic detection of a new hardware process.
